

ADHERIX HEALTH | PROVIDER RESOURCE

Clinic Bridge Readiness Checklist

A pre-launch checklist to prepare your clinic for Medicare GLP-1 Bridge enrollment. Complete before July 1, 2026. Submissions open on that date - prior authorization requests will not be processed before then.

1 | Prior Authorization Readiness

- ☐ **Obtain the CMS PA form**
Download from cms.gov/glp-1-bridge.pdf. Confirm fax number is listed before July 1.
- ☐ **Set up CoverMyMeds account for electronic submission**
CMS strongly encourages electronic PA. Register at covermymeds.com if not already set up.
- ☐ **Identify staff member responsible for PA submission**
Assign a single point of contact for Bridge PA requests to avoid delays.
- ☐ **Confirm fax line is operational**
Test fax to the central processor before July 1 if submitting by fax.

2 | Patient Identification

- ☐ **Identify current patients enrolled in Medicare Part D**
Pull patients on PDP or MA-PD plans. These are the only patients eligible for the Bridge.
- ☐ **Flag patients meeting BMI threshold**
BMI ≥ 30 , or BMI ≥ 27 with a qualifying comorbidity. Confirm with clinical team.
- ☐ **Verify qualifying comorbidities are documented in chart**
Heart failure, hypertension, CKD, pre-diabetes, or cardiovascular history must be in the record.
- ☐ **Create a prioritized outreach list**
Rank by clinical need and current GLP-1 prescription status.

3 | Staff Training

- ☐ **Brief front desk on Bridge eligibility questions**
Staff should know what Part D is and how to direct eligibility questions.
- ☐ **Review attestation requirements with prescribers**
PA must attest the drug is prescribed with ongoing lifestyle modification per FDA labeling.
- ☐ **Download and review CMS Prescriber Information sheet**
Available at cms.gov/files/document/glp-1-prescribers-c-1.pdf

4 | Patient Communication

- ☐ **Draft patient-facing communication about the Bridge**
Notify eligible patients that access is available starting July 1 at \$50/month.
- ☐ **Prepare responses to common patient questions**
Copay amount, which medications are covered, what happens at the pharmacy.
- ☐ **Set up a process for patients who call in asking about GLP-1 coverage**
Ensure calls are routed to a staff member who can speak to Bridge eligibility.

5 | Post-Enrollment Support

- ☐ **Define your protocol for monitoring patient adherence after enrollment**
The Bridge gets patients access. A structured follow-up plan keeps them on treatment.
- ☐ **Schedule follow-up touchpoints at 30, 60, and 90 days**
The first 90 days carry the highest dropout risk for GLP-1 patients.
- ☐ **Identify how you will track patients who go silent**
No response for 5+ days is an early dropout signal. Have a plan before it happens.

Need help setting up your Bridge workflow?
