

ADHERIX HEALTH | PROVIDER RESOURCE

Bridge Patient Onboarding Workflow

A step-by-step workflow for enrolling Medicare patients in the GLP-1 Bridge program. Designed for front desk and clinical staff. Bridge submissions open July 1, 2026.

PHASE 1 | ELIGIBILITY SCREENING

01 Identify eligible patients

Review your active Medicare Part D patient panel for Bridge eligibility.

- Enrolled in a standalone PDP or Medicare Advantage plan with drug coverage
- BMI ≥ 30 , or BMI ≥ 27 with a qualifying comorbidity
- Qualifying comorbidities: heart failure, hypertension, CKD, pre-diabetes, cardiovascular history

02 Confirm documentation is in the chart

Before submitting a PA, verify the patient record contains:

- Current BMI documented within the last 12 months
- Qualifying comorbidity with ICD-10 code on record
- Documented lifestyle modification plan (nutrition + physical activity)

The PA attestation requires confirmation that the drug is prescribed alongside structured lifestyle modification per FDA labeling.

PHASE 2 | PRIOR AUTHORIZATION

03 Submit the prior authorization

Submit to the CMS central processor - not the patient's Part D plan.

- Electronic: submit via CoverMyMeds
(cms.gov/medicare/coverage/prescription-drug-coverage/medicare-glp-1-bridge)
- Fax: use the CMS PA form at cms.gov/glp-1-bridge.pdf
- Submissions not accepted before July 1, 2026

04

Covered medications

The PA should be for one of the three covered Bridge medications:

- Wegovy (semaglutide injection or tablet)
- Zepbound KwikPen (tirzepatide)
- Foundayo

Prescribed for weight reduction and maintenance in combination with lifestyle modification. \$50 patient copay. Does not count toward Part D out-of-pocket limits.

PHASE 3 | PATIENT ONBOARDING

05

Notify the patient

Once PA is approved, contact the patient with next steps.

- Confirm which pharmacy they will use
- Explain the \$50 copay and that it does not count toward their Part D deductible
- Set expectations for first fill timeline

06

Schedule a follow-up

The first 90 days carry the highest dropout risk for GLP-1 patients.

- 30-day check-in: side effect review, confirm adherence
- 60-day check-in: dose tolerance, lifestyle modification progress
- 90-day check-in: outcomes review, continued engagement plan

Structured follow-up reduces early discontinuation. Consider automated engagement tools for patients between appointments.

Adherix Keep automates patient engagement after enrollment.

Phase-based SMS, drift detection, and injection tracking - built for GLP-1 programs.
